

GRID Active Threat Surveillance

Get ahead of threats with the built for banking cyber risk management solution

Financial institutions need to have full visibility to understand the threats they are up against and the ability analyze data and take action to protect. DefenseStorm GRID Active Threat Surveillance gathers and analyzes data from all types of sources, technology, tools, systems and analyzed to determine if you need to be concerned about happenings in your environment.

This unique built for banking approach to security, leverages the GRID Active intelligent data platform to monitor the network proactively and continuously for known attacks and suspicious activity.

- Full visibility, transparency and access to alert statuses, event and logs to better manage overall cyber risk readiness.
- GRID Active configuration logs are visible to allow customers to see how our co-managed services experts monitor their unique environment.
- Insights and updates from our cyber threat intelligence (CTI) team to defend against new threats across the FI.
- Ability to monitor data across the unique and complex technology systems of financial institutions.

The built for banking difference:

- Built for banking approach to cybersecurity inclusive of unique technology and requirements for financial institutions.
- Protect cloud, perimeter, network, endpoints, applications and data against cyberattacks.
- GRID Active is a cloud-based intelligent data platform that integrates cyber risk management solutions - enabled and enhanced through machine learning.

DefenseStorm Cyber Risk Management

Your ally in the fight in cyber risk, DefenseStorm's unique built for banking cyber risk management solution brings together an advanced technology platform with a highly skilled security operations team. It delivers integrated risk assessment, security and fraud detection -- all while ensuring your FI can maintain and prove regulatory compliance. It's how you're your FI can continually improve your cyber risk maturity and cyber risk readiness.

When it comes to cyber risk management, DefenseStorm is the best offense.

GRID Active Threat Surveillance offers enhanced cybersecurity protection through products and services options that integrate with our existing platform. These include EDR functionality to enable audit and cyber insurance requirements plus gain end point coverage and in-depth review of alerts. DefenseStorm also can provide Vulnerability Management Services for continuous risk mitigation and posture improvement with integrated reports through platform.

Co-managed Approach

Our co-managed approach to cybersecurity is supported by our security operations team of analysts and engineers who continuously monitor and protect the FI's network. The team is comprised of certified cyber professionals to augment an FI's staff and investigate alerts on their behalf, allowing them to focus on their core business.
