

# GRID Active Reporting

GRID Active Reporting enables financial institutions to exercise informed decision-making through consistent metrics and ensures confidence in the execution of their cyber risk management program and strategic objectives. Institutions monitor their program in real-time using ingested log data along with GRID Active insights and can leverage a library of pre-built dashboards, visualizations, and reports.

## GRID Active Reporting Overview

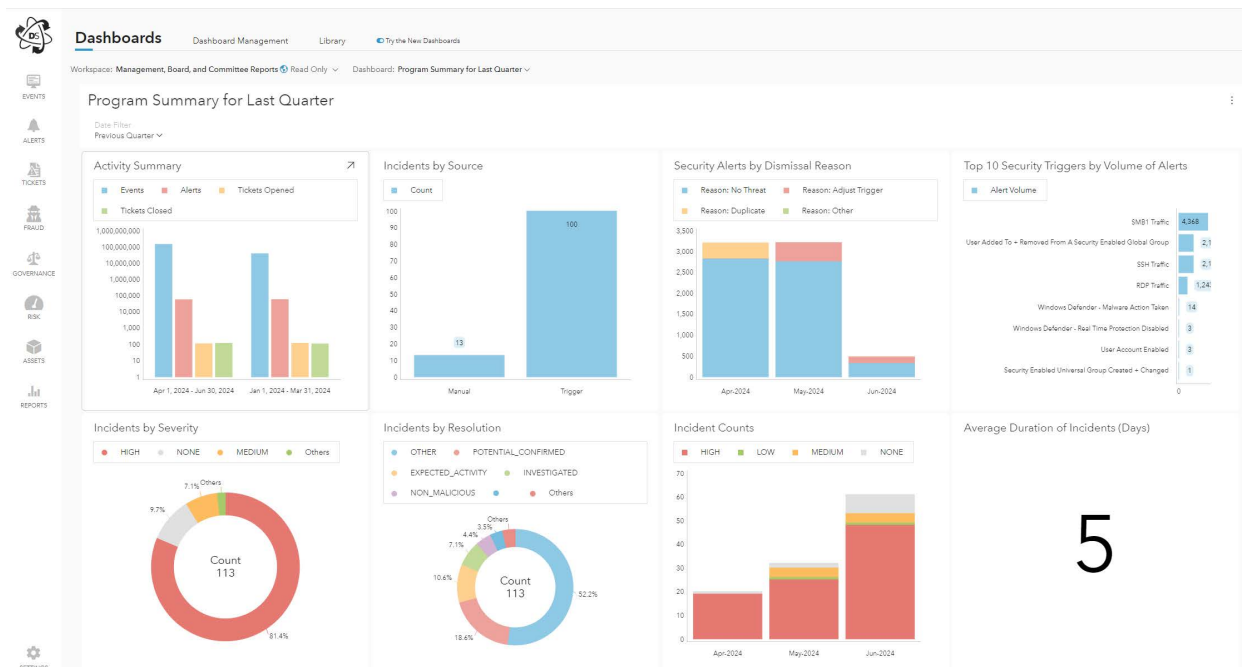

- ✓ Maintain access to aggregated log data
- ✓ Easy to use drag and drop data sources to build custom visualizations
- ✓ Access a library of pre-built dashboards, visualizations, & Board Reports
- ✓ Customize and export dashboards and reports to Excel, PowerPoint, PDF, or PNG
- ✓ Manage User Entitlements and reporting
- ✓ Monitor program against defined Key Performance Indicators (KPI) and Key Risk Indicators (KRI)

# GRID Active Reporting

## Powered by GRID Active

GRID Active is our proprietary data ingestion engine that provides access, analysis, and action across all areas of cyber risk, giving you insights into evolving threats of attack against your institution. By consolidating data into a single platform, you're able to identify and prioritize previously unseen threats while enhancing protections against cyber threats and providing oversight of risk.

5

- Integrated platform enabled and enhanced through machine learning, providing access, analysis, and action for all areas of cyber risk
- Improves internal efficiencies by leveraging log data to complete governance and monitoring activities
- Intelligent data engine gathers, analyzes, and reports real-time insights on evolving cyber risks
