

# KnowBe4

## Security Awareness and Training

KnowBe4 is the world's largest integrated platform for security awareness training and simulated phishing. It addresses the critical threat of social engineering by educating employees on how to identify and respond to cybersecurity threats. Your employees are the weak link in your IT security. Social engineering is the number one security threat to any organization. Numerous reports and white papers show organizations are exposed to massive increases in the number of cyber attacks over the past five years. With a comprehensive library of training content, KnowBe4 helps organizations reduce risk by providing localized threat intelligence and tailored risk assessments. This dual approach ensures that companies can effectively mitigate both global and local cyber threats. DefenseStorm provides KnowBe4 as an add-on service with the goal of improving security awareness among employees and, as a result, strengthening your human firewall.

### The KnowBe4 Approach

#### Baseline Testing

KB4 offers baseline testing to evaluate your users' susceptibility to phishing attacks through a complimentary simulated phishing campaign [Phish-prone™ Percentage].

#### Train Your Users

Utilize the extensive collection of security awareness training materials, which is comprised of interactive modules, videos, games, posters, and newsletters. Take advantage of automated training campaigns that include scheduled reminder emails.

#### Phish Your Users

Employ top-notch, completely automated simulated phishing attacks, featuring a wide range of templates for unlimited use, including community-based phishing templates.

#### See The Results

Explore robust reporting capabilities to demonstrate statistics and graphs for security awareness training and phishing. These reports are designed for management to showcase successes and identify areas for improvement.

### RESOURCES

**Training Library & Simulated Phishing Content:** KnowBe4 content is regularly updated for fresh and unique ways of bringing security awareness to your users.

The following types of content are available in the easily accessible ModStore:

- Interactive Training Modules
- Video Modules
- Mobile-First Modules
- Assessments
- Games
- Newsletters and Documents
- Posters and Artwork

*The content has been compiled from the KnowBe4 Buyer's Guide and related partner materials.*

# KnowBe4 + DefenseStorm

## The DefenseStorm Difference

With the **DIAMOND-level subscription**, the following is included and managed by the DefenseStorm team:

- Baseline testing
- Communication of the Security Awareness Program
- Subsequent email campaigns and user training
- Reporting
- Governance integration [if purchased as an add-on]

## DefenseStorm will:

- Manage the customization, configuration, and integration with your financial institution (FI) email system to establish a “phish” button response for reporting malicious emails.
- Partner with FI’s training department to establish a regular training cadence for continuous employee education.
- Augment the type, frequency, and complexity of phishing campaigns
- Provide standardizing and reporting on mandatory security training.
- Provide internal policy review and reporting
- Deliver updated content for awareness as circumstances change.

\* **Compliance Plus** is available as an add-on to the **DIAMOND-level subscription**

KnowBe4’s Compliance Plus training is interactive and engaging, featuring real-life simulated scenarios to help users learn how to respond in challenging situations. It covers difficult topics such as sexual harassment, diversity and inclusion, discrimination, and business ethics. The library includes various media formats and reinforcement materials to support your compliance training program.
