

Cyber Risk Management Built for Banking

Unify threat detection, risk oversight, and exam-ready evidence in one platform purpose-built for banks and credit unions.

THE CHALLENGE

Rising Threats, Mounting Scrutiny, Fewer Resources

Financial institutions face a convergence of rising cyber threats, mounting examiner expectations, and boardroom scrutiny, yet most security solutions are generic, fragmented, and not designed for the realities of banking.

The result? Alert fatigue, manual evidence collection, siloed tools, and lean teams stretched thin trying to prove oversight effectiveness across governance, risk, and compliance.

THE SOLUTION

DefenseStorm: Purpose-Built Cyber Risk Management

DefenseStorm operates at the intersection of cybersecurity and banking oversight, delivering the only platform that unifies MDR, cyber risk, and governance into one system purpose-built for banks and credit unions.

We help your institution move from reactive security to proactive oversight, with always-on expertise, unified visibility, and examiner-trusted evidence.

PLATFORM SPOTLIGHT

Powered by GRID Active

GRID Active is the unified, cloud-native platform that combines real-time data ingestion, AI-driven analytics, and intelligent control mapping to deliver proactive detection, faster investigations, and audit-ready evidence, all in one place.

Unified Data Engine

One trusted view of all your risk and security data. Ingests and correlates activity across IT, security, and cloud to enable faster, more confident decisions.

AI Engine

Continuously adaptive threat detection trained on financial-services behavioral patterns. Reduces noise, enriches alerts, and prioritizes what matters.

Mapping Engine

Automatically transforms detections into audit-ready evidence mapped to FFIEC, GLBA, NIST, and examiner procedures.

Integrated Solutions Across the Cyber Risk Spectrum

Managed Detection & Response

Always-on threat detection and response across your entire environment, including network, endpoint, cloud, and core banking, delivered as a fully managed service through GRID Active and our Collaborative SOC.

Threat Surveillance: Real-time ingestion, correlation, and monitoring across your technology stack with AI-driven behavioral analytics tuned for financial services.

Alert Triage & Investigation: Enriched alerts with dynamic risk scoring, reducing noise so your team focuses on confirmed threats, not false positives.

Guided Response: SOC analysts acknowledge alerts within 82 seconds (MTTA), providing banking-context investigation and step-by-step remediation guidance.

Key outcome: 24x7 detection and response coverage purpose-built for banking, without the cost or

Governance & Monitoring

Validate control performance, track program maturity, and maintain continuous exam readiness. Purpose-built governance workflows with accountability tracking, version control, and configurable board-ready reporting, designed for the unique oversight needs of financial institutions.

Key outcome: Prove governance effectiveness to boards and examiners without adding headcount.

Cyber Risk & Compliance

Automate evidence collection, integrate continuous control monitoring, and map oversight to examiner expectations. Real-time dashboards aligned to FFIEC, GLBA, and NIST ensure your institution can demonstrate control effectiveness at any point, not just during exam season.

Key outcome: Cut manual exam prep, reduce risk scores, and build regulator and board confidence.

Your Collaborative Security Operations Center

DefenseStorm's Collaborative SOC is comprised of certified cyber professionals who act as a true extension of your staff. Available 24x7, they triage alerts, investigate threats, and guide response, all within the context of banking oversight and examiner expectations.

This is not an outsourced service. It's a collaborative partnership built to augment your existing team, allowing you to focus on your core business while maintaining the coverage examiners expect.

Why DefenseStorm

- 
Built for Banking
 The only platform designed exclusively for banks and credit unions, embedding regulatory knowledge and examiner expectations into every workflow.

- 
Unified Platform
 One integrated system uniting MDR, cyber risk, and governance. Fewer vendors, less swivel-chair work, clearer oversight.

- 
Collaborative Expertise
 CTS Ops analysts available 24x7 as an extension of your team with banking-focused triage, investigation, and guided response.

- 
Examiner Recognition
 Automated evidence mapped to 10,000+ banking-specific controls across GLBA, FFIEC, and NCUA frameworks.

By the Numbers

82 sec Mean Time to Acknowledge (MTTA)	<15 min MTTD: critical alerts	<40 min MTTD: all severities
<24 hr MTTR for critical alerts	138+ Audit artifacts auto-generated per month	20+ hrs Saved monthly on evidence collection
38% Reduction in residual risk within 12 months	91% Detections auto-mapped to regulatory controls	200+ Banks and credit unions protected
