

PLATFORM DATA SHEET

THE ONLY CYBER RISK PLATFORM BUILT FOR BANKING

Stop threats before they become incidents. Prove your program works. One platform, backed by a 24x7 Collaborative SOC of banking-fluent cybersecurity analysts, and powered by AI you can explain and defend. Built exclusively for U.S. banks and credit unions.

THE CHALLENGE

Financial institutions face relentless cyber threats, mounting examiner expectations, and boardroom scrutiny. Yet most solutions are generic, fragmented, and not designed for the realities of banking. You should not need five vendors to cover one program.

THE SOLUTION

DefenseStorm brings threat detection and response, risk, and governance together on one platform, and extends it with best-in-class partners for the capabilities that sit alongside it. End-to-end coverage from a partner that does only banking.

WHAT DEFENSESTORM DELIVERS

- **Managed Detection & Response (MDR).** SIEM, a 24x7 Collaborative SOC, and endpoint response, built only for banks and credit unions.
- **Risk & Governance.** Independent second-line visibility into your program: control monitoring, threat-informed risk assessments, and the evidence to back every control.
- **GRID Active.** The intelligent data engine that connects it all.
- **Governed AI.** Seven Built for Banking AI Principles, explainable and defensible to an examiner.

EXTENDED THROUGH OUR PARTNERS

- Endpoint detection & response.** On the tools you already run: CrowdStrike, Carbon Black, Microsoft Defender.
- Vulnerability management.** Tenable, CODA.
- Dark web monitoring.** Allure.
- Security awareness & phishing training.** KnowBe4.

WHY DEFENSESTORM

Built for Banking. The only platform designed exclusively for banks and credit unions, embedding regulatory knowledge and examiner expectations into every workflow.	One platform, not five vendors. MDR, risk, and governance in one view, so your lean team stops swivel-chairing across consoles.	Always-on expertise. A US-based Collaborative SOC of banking-fluent cybersecurity analysts, monitoring and guiding response 24x7.	AI you can explain and defend. Every AI output is governed, so leadership owns the decision and the rationale holds up under examiner scrutiny.
---	--	--	--

KEY BENEFITS & OUTCOMES

- **Lower cost, less complexity.** Consolidating tools saves an average of \$170K a year and ends the swivel-chair work across separate consoles.
- **Confidence with boards and examiners.** Automated, audit-ready evidence proves the program works and cuts exam prep by about 70%.
- **Threats contained without new hires.** A 24x7 Collaborative SOC triages, investigates, and guides response, so critical threats are handled quickly.
- **Oversight grounded in reality.** Risk and governance run on the same platform as your threat operations, so posture reflects what is actually happening in your environment.

WHO IT'S FOR

CISO or ISO.

Extend your team with examiner-ready reporting, and consolidate SIEM, SOC, and EDR into one banking-specific service.

CIO or CTO.

Reduce vendor sprawl with one integrated, peer-proven platform that works with the core and the tools you already run.

Risk officer.

Independent, real-time visibility into control effectiveness, mapped to the frameworks and exam procedures that apply to your program.

BY THE NUMBERS

~80M → 3

events a day per institution filtered to the few that need a person (99.9% noise reduction)

< 3 min

typical detection, from data reaching us to a tracked investigation

~5 min

to a named analyst claiming the case

98%+

of tested attacks detected in independent pen testing (trailing 365 days)

16,000+

controls mapped to the frameworks and exam procedures examiners use

~\$170K

saved a year from tool consolidation

750+

detection triggers, fully viewable

200+

banks and credit unions

~70%

less exam prep

ONE BANKING-ONLY PARTNER FOR THE CORE OF YOUR SECURITY PROGRAM

See the only cyber risk platform built for banking inside your environment.
